

Monkeypox virus A29L antigen colloidal gold immunochromatography

Cat: MPYF-1022-KX1734

This product is for research use only and is not intended for diagnostic use.

This product is Monkeypox Virus (MPV) immunochromatography.

Product Description

Usage	RUO
-------	-----

Target

Target	A29L
--------	------

Full Name	A29L
-----------	------

Introduction	Monkeypox virus (MPV) is a double-stranded DNA, zoonotic virus and a species of the genus Orthopoxvirus in the family Poxviridae. It causes a disease that has similar characteristics to smallpox but with a milder rash and a lower death rate. The virus causes disease in both humans and animals.
